

Love At Home — Week 2 Kick-off Meeting Summary

Meeting date: 6 October 2026

Week 2 deliverables: Friday, 9 October 2026

Next meeting: Tuesday, 13 October 2026 at 9:00 AM

Thank you for today's discussion. Below is a summary of the key decisions, information required from the Love At Home team, and the work planned for Week 2.

1. Key Decisions and Discussion

Brand and Logo

We confirmed **Logo Concept A** as the preferred direction.

The overall concept — a home supported by two hands — will remain unchanged. The next revision will focus on colour refinement:

- Adjust the current red/orange tone to a **brighter and purer red**.
- Refine the colour of the home element so that the overall logo feels brighter and more distinctive.
- Once the logo colour is finalised, the website colour palette will be updated accordingly.
- The website will move towards a **warmer visual direction**, rather than using blue or green as the primary brand colours.

Colour palette 1

Colour palette 2

Website Service Structure

The homepage will continue to present the three main service categories aligned with the current aged-care service structure:

- **Clinical Support**
- **Independence**
- **Everyday Living**

In addition, a separate highlighted section will be introduced for helping clients **upgrade their Support at Home arrangements**, particularly in areas such as:

- Assistive Technology
- Home Modifications
- Additional support or funding opportunities where applicable

This will be positioned as an important value-added service rather than as a fourth core service category.

For services requiring more detailed explanation, the homepage can later link to dedicated service pages or expanded content.

Pricing

We agreed that pricing can be used as a marketing advantage because Love At Home has competitive rates.

Rather than placing the entire pricing schedule on the homepage:

- A small number of **featured or particularly competitive prices** will be highlighted.
- The homepage will include a way to view further pricing information.
- The complete pricing information can later be provided through a dedicated webpage and/or downloadable PDF.
- The primary goal remains encouraging prospective clients to make an enquiry rather than presenting a very large pricing table on the homepage.

Team and Trust

A new **Team section** will be added to the homepage to strengthen trust and demonstrate the experience and qualifications of the Love At Home team.

Where appropriate, the website can later also include:

- Staff qualifications and professional experience
- Relevant credentials
- Client testimonials

- Third-party reviews

We also discussed using third-party review sources rather than relying only on testimonials written directly on the website. Possible future options include **Google Reviews** or a review platform such as Trustpilot.

Enquiry Form and Lead Management

The enquiry form will be updated based on the Week 1 feedback.

Confirmed changes include:

- Email will be optional.
- Clients will be able to select multiple types of support.
- Some wording and field labels will be revised to make the form more conversational and client-friendly.
- The open-ended question will focus more directly on what the prospective client would like to ask.

For the lead workflow:

Website enquiry → Google Sheet → automatic email notification → staff follow-up → lead status updated

New submissions should be available immediately rather than waiting for a weekly report.

The Google Sheet will provide a central record for enquiries and can later be used for reporting and analysis, for example:

- Number of enquiries received
- Follow-up status
- Service types requested
- Lead sources and trends

Service Area and Inclusivity

The website messaging will be revised so that Love At Home is not perceived as serving only particular suburbs or only Chinese- and English-speaking clients.

The messaging should communicate that Love At Home:

- Welcomes clients from **all cultural backgrounds**
- Can support clients with different language needs
- Provides services across **Sydney metropolitan areas**
- Is culturally responsive without positioning itself as exclusively serving one cultural community

The bilingual English/Chinese website remains useful, but the broader brand positioning will stay inclusive.

Google Presence and SEO

We discussed establishing a stronger Google presence.

The work will be divided into two areas:

Technical setup

- Google Search Console
- Website metadata
- Sitemap/indexing setup
- Other technical SEO requirements

Marketing/search strategy

- Search visibility
- Content
- Advertising
- Longer-term SEO strategy

Google Business Profile / Google Maps registration should also be established so that Love At Home can build its local search presence and collect Google reviews.

Contact Number

We discussed whether the website should use an existing standard phone number or a **1300 number**.

A 1300 number may provide a more professional appearance and can support call routing or recorded messages.

This has **not yet been finalised** and can be confirmed separately.

Future Educational Content

We also discussed creating educational content to help clients and families understand areas that can otherwise be confusing, such as:

- Funding arrangements
- Client contributions
- Income testing
- Support options
- Assistive Technology / Home Modification funding

This could later form an FAQ or educational resources section.

Short educational videos and multilingual versions may also form part of the future marketing content workflow.

Website Platform and Development Approach

Following the Week 2 scope review, the preferred technical direction is to keep the website source code under our own control rather than continuing to extend the Hostinger Website Builder.

Hostinger can still be retained for domain and/or hosting infrastructure where appropriate, while the website itself is developed in a GitHub-managed codebase. This will make it substantially easier to use Codex for implementation, maintain version history, review changes, roll back safely and extend the site as the enquiry, SEO and marketing workflows become more sophisticated.

The proposed development workflow is:

Codex → GitHub → local/staging preview → Love At Home review → production deployment

The existing live website should remain unchanged during development until the revised homepage and enquiry workflow have been reviewed and approved.

Initially, content updates can be managed in the codebase. If the Love At Home team later needs to edit pricing, staff profiles or FAQ content directly without developer support, a lightweight CMS can be introduced rather than making the website dependent on a page builder.

2. Information Required from Love At Home

To complete the next version of the homepage, please provide the following where available:

Pricing

- A small selection of the most competitive / important prices you would like highlighted on the homepage
- The current full pricing schedule, if available

Team

- Team member name
- Role/title
- Photo

- Short professional introduction
- Qualifications / certifications
- Relevant experience
- Languages spoken, if appropriate to display

Trust and credentials

- Existing testimonials, if available
- Professional/service credentials that can be shown publicly
- Existing client or staff photos approved for website use

Enquiry workflow

- The email address(es) that should receive automatic notifications when a new enquiry is submitted

Business information

- Confirmation of the preferred public contact number once decided
- Information required for Google Business Profile / Google Maps registration if not already available

These materials can be added progressively as they become available and do not need to delay the core website work.

3. Week 2 Work

During Week 2, I will focus on moving the approved Week 1 direction into a working, code-controlled homepage implementation and lead workflow. The existing live website will remain unchanged while the revised version is developed and reviewed.

The main work includes:

- Refine Logo Concept A and test the brighter red colour direction
- Establish the corresponding warm website colour palette
- Implement the revised homepage in a GitHub-managed codebase so future changes can be handled through Codex, version control and reviewable code changes
- Use Hostinger for domain/hosting infrastructure where suitable, rather than relying on Hostinger Website Builder as the core editing layer
- Prepare a local/staging preview for Love At Home review before any production replacement
- Update the homepage around the three confirmed service categories
- Add the highlighted Support at Home upgrade / Assistive Technology / Home Modification section
- Add the new Team section

- Add the new Pricing section
- Revise the enquiry form based on the agreed feedback
- Connect enquiries to the Google Sheet workflow
- Add automatic email notification for new enquiries
- Review and update service-area and inclusivity wording
- Begin the technical setup/planning for Google Search Console and Google Business presence
- Review the working homepage on desktop and mobile for consistency, accessibility and usability

4. Friday Deliverables — 9 October

By **Friday, 9 October**, the planned Week 2 deliverables are:

1. Updated Logo Concept A / refined colour direction
2. Working code-controlled homepage preview with the agreed visual direction
3. Revised three-category service presentation
4. New Support at Home upgrade highlight section
5. Pricing section structure
6. Team section structure
7. Updated enquiry form
8. Google Sheet lead workflow
9. Automatic enquiry email notification workflow
10. Revised inclusive service-area messaging
11. Initial technical SEO / Google setup recommendations
12. GitHub / Codex development workflow and hosting/deployment recommendation

Content supplied by Love At Home during the week will be incorporated where possible.

5. Next Meeting

Tuesday, 13 October 2026 — 9:00 AM

At the next meeting, we will review the Week 2 deliverables, confirm any final homepage changes and decide which items should move into implementation or further development.

6. Preliminary Focus for Next Week

Subject to the Week 2 review, the next stage is expected to move from the working homepage preview into broader website implementation, staging/deployment and supporting marketing infrastructure.

Likely areas include:

- Finalise the approved homepage and deploy through the agreed GitHub → staging → production workflow
- Confirm Hostinger's role as domain/hosting infrastructure rather than the core Website Builder editing layer
- Build out detailed service information/pages
- Finalise pricing presentation
- Complete team and trust content
- Complete Google Business Profile / Google Search Console setup
- Establish review/testimonial integration approach
- Improve SEO structure and search-ready website content
- Begin planning the FAQ / educational content section
- Start defining the repeatable marketing-content workflow for future educational and promotional content

The exact Week 3 priorities will be confirmed during the Tuesday meeting based on the completed Week 2 version and any new materials provided by the Love At Home team.
